

# Lead Service Lines Replacement Program

## Importance of Changing the Service Lines

In older homes and buildings, lead can reach from service lines, solder, and fixtures into tap water and become a significant source of lead exposure. In children, lead exposure can cause irreversible and life-long health effects, including decreasing IQ, focus, and academic achievement. EPA's new Lead and Copper Rule strengthens regulatory requirements to better protect children and communities from lead in drinking water.

## Finding the Lead, Copper or Galvanized Pipes
